Michael Tunwashe

Quantitative Engineering | Backend & AI Systems

Lagos, Nigeria | motrenewed@gmail.com | github.com/TADSTech | linkedin.com/in/Tadstech

Summary

Mathematics undergraduate building production-grade backend systems and data-driven applications. I bridge the gap between rigorous mathematical concepts and robust software engineering. Passionate about quantitative development, algorithmic design, and creating optimized, scalable platforms.

Experience

Technical Lead, LunixDV *April 2026 – Present*
- Architecting scalable backend systems for AI and financial technology applications.
- Leading end-to-end software development, from infrastructure design to deployment.
- Integrating quantitative models and data pipelines into production environments.

LLM Evaluator, Turing *December 2025 – February 2026*
- Conducted rigorous evaluation of large language models against complex technical and logical prompts.
- Performed root-cause analysis on failure modes to improve model reasoning and reliability.
- Processed large-scale model outputs using structured analytical frameworks.

Data Analyst Intern, HNG Tech *August 2025 – November 2025*
- Engineered Python and SQL workflows to automate reporting pipelines and improve data accuracy.
- Transformed unstructured data sets into actionable dashboards and insights for stakeholders.
- Optimized query performance for analytical systems.

Projects

Centaur (Trading API & Strategy Platform) *February 2026 – Present*
- Developing a high-performance financial API for systematic market data access and ML model orchestration.
- Building a robust backtesting engine to evaluate quantitative trading strategies across historical datasets.
- Designing modular architectures to support rapid experimentation and algorithmic execution.

WXATA (WhatsApp Automation Platform) *April 2026 – Present*
- Engineering a high-throughput automation platform using Bun, TypeScript, and a real-time React dashboard.
- Implementing low-latency WebSocket communication for concurrent event processing.
- Designing a reliable, stateful backend architecture with granular execution permissions.

BRIS (Retail Intelligence Platform) *October 2025 – January 2026*
- Built an end-to-end analytics platform utilizing FastAPI, PostgreSQL, and SQLAlchemy in a Dockerized environment.
- Developed robust ETL pipelines to transform raw data into optimized schemas for analytical querying.
- Implemented synthetic data generation tools to test and validate system resilience.

Technical Skills

Languages: Python, SQL, TypeScript, JavaScript, C++ (in progress)
Engineering: Linux, Docker, PostgreSQL, FastAPI, Git, REST & WebSocket APIs, Bun
Quantitative & Data: NumPy, pandas, SciPy, Statistical Computing, Algorithms & Data Structures
Domains: Backend Systems, Quantitative Finance, Data Engineering

Education

University of Lagos *Expected 2028* **B.Sc. Mathematics**
Relevant Coursework: Linear Algebra, Probability & Statistics, Differential Equations, Abstract Algebra
